

The **NEW 5035 Sampler** from CEL Scientific Corp. is a breakthrough design in soil sampling technology. Never before has taking a sample for 5035 methods been so easy or cost effective.

Our patent-pending design simplifies the entire process, which means you spend less time sampling, and save money.

Our patent-pending design simplifies the sampling process, resulting in reduced labor costs.

These samplers are made from a high quality, strong, long lasting material, which saves you even more money.

Features:

The handle is ergonomic, inexpensive, lightweight, and extremely durable. It features a quick release to easily attach and remove a sampler, and a built in indicator to let you know when you have retrieved a proper sample.

The samplers are specially designed to take effortless samples, and two o-rings ensure no VOC loss. They have a novel plunger design on the back, to facilitate easy sample removal. Simply push down with your thumb like a syringe to remove the sample. No special tools or handles needed! Our cap easily threads on to save time, and feature a special Teflon seal to prevent VOC loss or contamination.

Each sampler comes in an airtight bag that is resealable. So when you are done sampling, just stick it back in the bag and into the ice chest.

Easy as 1-2-3:

1. Sampler snaps into handle
2. Take sample
3. Cap threads on, and sampler pops out with the push of a button.

And when you want to remove the sample, the plunger on the back of the sampler allows you to use it like a syringe. No special tools or handles needed!
